

MERCON Logistics — UI/UX Specification

Version: 1.1 (Unified)

Date: July 2026

Prepared For: MERCON Logistics Services Company

Prepared By: Starshape

1. Introduction

The UI/UX Specification defines the visual and interaction standards for the MERCON Logistics Management System. It serves as the design reference for the four platforms:

1. Driver Operations App (React Native — Android & iOS)
2. Operator Mobile App (React Native — Android & iOS)
3. Operator Web Dashboard (React)
4. Admin Web Dashboard (React)

This document establishes a consistent design language, navigation patterns, reusable components, and screen specifications to ensure a seamless user experience across all platforms.

2. Design Objectives

- Design an intuitive and user-friendly interface for all user roles
 - Reduce the number of steps required to complete operational tasks
 - Enable operators to monitor and manage logistics efficiently from web and mobile
 - Provide drivers with a simple, distraction-free workflow
 - Present critical operational information with clear visual hierarchy
 - Ensure consistency across mobile and web applications
 - Create a scalable design system that supports future product growth
 - Deliver an enterprise-grade user experience that reflects MERCON's operational standards
-

3. Design Principles

01 · User-Centered Design

Every interface is designed around the daily workflows of drivers, operators, and administrators.

- Prioritize user tasks over visual complexity
 - Design around real operational workflows
 - Minimize the number of steps required to complete actions
 - Ensure intuitive navigation across all platforms
-

02 · Simplicity First

The interface should remain clean and uncluttered, understandable without training.

- Simple layouts with clear hierarchy
- Avoid unnecessary visual elements
- Display only relevant information
- Reduce cognitive load

03 · Speed & Efficiency

Built for fast-paced logistics operations requiring quick, accurate task completion.

- Quick access to frequently used features
- Minimal form inputs
- Fast navigation between screens
- Optimized workflows for daily operations

04 · Consistency

A consistent visual language and interaction pattern across mobile and web platforms.

- Consistent colors, typography, and spacing
- Standardized buttons and icons
- Reusable UI components
- Uniform navigation patterns

05 · Information Hierarchy

Critical information is always displayed prominently for fast decisions.

- Highlight important operational data
- Group related information logically
- Use visual emphasis for urgent actions
- Maintain clear content organization

06 · Operational Visibility

Immediate access to live operational data without navigating multiple screens.

- Real-time trip status
- Live GPS tracking
- Emergency visibility
- Fleet status overview
- Driver availability
- Document and maintenance alerts

07 · Reliability & Trust

Clear communication of system status and user actions builds confidence.

- Clear confirmation messages
- Real-time synchronization indicators

- Transparent system status
- Reliable data presentation

08 · Safety & Error Prevention

Minimizes user errors and prevents accidental actions during operations.

- Confirmation for critical actions
- Required field validation
- Error prevention through guided workflows
- Clear warning messages
- Easy recovery from mistakes

09 · Mobile-First Experience

Driver App and Operator Mobile App designed for one-handed mobile use.

- Large touch targets
- Thumb-friendly navigation
- Optimized screen layouts
- Minimal typing
- Quick action buttons

10 · Scalability

The design system supports future modules and features without major redesign.

- Modular components
- Flexible layouts
- Expandable navigation
- Reusable design patterns

11 · Accessibility

Usable by a wide range of users under different operating conditions.

- High contrast between text and background
- Readable typography
- Color should not be the only indicator of status
- Clear icons with labels
- Consistent interaction patterns

12 · Enterprise Quality

The visual language reflects a professional enterprise logistics platform.

- Clean and modern interface
- Professional color palette
- Structured layouts
- Consistent spacing
- High-quality visual components
- Minimal visual distractions

4. Design System

4.1 Color System

Primary Colors

Color	Usage
Primary Blue	Primary buttons, navigation, active states
Primary Orange	Brand highlights, key actions
White	Backgrounds and cards
Light Gray	Secondary backgrounds
Dark Gray	Primary text

Semantic Colors

Color	Usage
Green	Success, completed trips, available status
Orange	Pending, scheduled, maintenance due
Red	Emergency, errors, critical alerts
Blue	Active trips, links, selected items
Gray	Disabled or inactive elements

Status Colors

Status	Color	Hex Suggestion
Created	Gray	#9E9E9E
Assigned	Blue	#2196F3
Ready to Start	Light Blue	#42A5F5
Cargo Verification	Orange	#FF9800
In Transit	Green	#4CAF50
Emergency / Halted	Red	#F44336
Arrived	Dark Green	#2E7D32
Delivery Verification	Orange	#FFA726
Completed	Green	#4CAF50
Cancelled	Red	#EF5350
Maintenance Due	Orange	#FF9800
Document Expiring	Orange	#FFB74D

4.2 Typography

Typography should emphasize readability across mobile and desktop devices.

Style	Usage
H1	Screen Titles
H2	Section Titles
H3	Card Titles
Body	General Content
Caption	Supporting Information
Button	Buttons & CTAs

Guidelines: Clear hierarchy · High readability · Consistent spacing · Minimal font variations

4.3 Spacing System

An 8-point spacing system is used throughout the application.

Value	Usage
4 px	Small spacing
8 px	Component spacing
12 px	Internal padding
16 px	Card padding
24 px	Section spacing
32 px	Large spacing
48 px	Major layout spacing

4.4 Border Radius

Component	Radius
Buttons	Medium
Cards	Large
Inputs	Medium
Bottom Sheets	Large
Dialogs	Large

Rounded corners create a modern, approachable interface while maintaining a professional appearance.

4.5 Shadows & Elevation

Elevation	Usage
Level 1	Cards
Level 2	Floating Buttons
Level 3	Dialogs
Level 4	Bottom Sheets

Shadows should remain subtle to maintain a clean enterprise design.

4.6 Iconography

Categories: Navigation · Actions · Status Indicators · Notifications · Vehicle Information · Driver Information · Reports · Settings

Guidelines: Consistent icon style · Simple outlines · Meaningful symbols · Accompanied by labels where necessary

4.7 Buttons

Primary Button — Used for the main action on every screen.

> Login · Start Trip · Create Trip · Save

Secondary Button — Used for alternative actions.

> Cancel · Back · View Details

Destructive Button — Used for irreversible actions.

> Delete · Cancel Trip

Floating Action Button (FAB) — Used exclusively for the primary action within a screen.

> [+] Create Trip

4.8 Input Components

- Text Field
- Search Field
- Dropdown
- Date Picker
- Time Picker
- Number Input
- Phone Number Input
- Multi-line Text Area
- Toggle Switch
- Checkbox
- Radio Button

4.9 Cards

Cards are the primary information containers throughout the application.

Card Types: Trip Card · Driver Card · Vehicle Card · Customer Card · Report Card · Notification Card · Maintenance Card

Each card should display only the most relevant information with clear actions.

4.10 Navigation Components

Mobile:

- Top App Bar
- Bottom Navigation

- Floating Action Button
- Bottom Sheet
- Modal Dialog

Web:

- Sidebar Navigation
- Top Navigation Bar
- Breadcrumbs
- Data Tables
- Filter Panel

4.11 Status Indicators

Visual indicators provide immediate operational awareness.

Status Chips:

Chip	Color	Context
Created	Gray	Trip created, not yet assigned
Assigned	Blue	Driver and vehicle assigned
Ready to Start	Light Blue	Driver acknowledged trip
Cargo Verification	Orange	Driver uploading cargo photos
In Transit	Green	Trip actively in progress
Emergency	Red	Emergency reported
Halted	Red	Trip paused
Arrived	Dark Green	Driver at destination
Delivery Verification	Orange	Driver uploading delivery photos
Completed	Green	Trip finished successfully
Cancelled	Red	Trip cancelled
Scheduled	Orange	Trip scheduled for future
Maintenance Due	Orange	Vehicle maintenance alert
Expiring Soon	Orange	Document expiry alert
Available	Green	Driver/vehicle available
Offline	Gray	Device offline

Status indicators should always combine color with text for accessibility.

4.12 Image Components

Used for operational verification:

- Cargo Photos
- Pickup Photos
- Delivery Photos
- Driver Profile Photo
- Vehicle Image
- Document Images

Image upload should support camera capture and gallery selection where applicable.

4.13 Map Components

Maps are a core part of the logistics experience:

- Live Driver Location
- Route Preview
- Pickup Marker
- Drop Marker
- ICCES GPS Marker
- ETA Display
- Route Line
- Current Speed
- Distance Remaining
- Geofence Radius (500m around destination)

4.14 Notification Components

Notification cards should clearly communicate operational events.

Types: Trip Updates · Emergency Alerts · Document Expiry · Maintenance Alerts · System Notifications

Each notification includes: Icon · Title · Description · Timestamp · Priority Indicator

4.15 Data Visualization

Charts and metrics for quick operational insights:

- KPI Cards
- Line Charts
- Bar Charts
- Pie Charts
- Progress Indicators
- Status Counters

Used primarily in the Operator Dashboard, Admin Dashboard, and Reports modules.

4.16 Share Trip Component

Mobile (Bottom Sheet):

Action	Description
Share via WhatsApp	Opens WhatsApp with pre-formatted trip details
Download PDF	Generates and downloads a trip summary PDF
Copy Link	Copies a shareable trip link to clipboard

Web (Dropdown Menu):

Action	Description
--------	-------------

Share via WhatsApp	Opens WhatsApp Web with pre-formatted trip details
Download PDF	Downloads a trip summary PDF
Copy Link	Copies a shareable trip link to clipboard

Accessible from the Trip Details screen on both Operator Web Dashboard and Operator Mobile App.

5. Navigation Structure

5.1 Driver Operations App Navigation

The Driver Operations App follows a guided workflow designed to help drivers complete their assigned trips with minimal interaction.

Primary Workflow (Linear):

```

Splash
├─ Login (Employee ID or Mobile Number + PIN)
│   └─ Waiting for Assignment
│       └─ Assigned Trip
│           └─ Trip Details
│               └─ Start Trip → Cargo Photo Upload (mandatory)
│                   └─ Live Navigation
│                       ├── Emergency (Floating Action Button)
│                       ├── Trip Halt
│                       └─ Arrival Confirmation (GPS geofence / manual)
│                           └─ Delivery Photo Upload (mandatory)
│                               └─ Trip Completed
│                                   └─ Waiting for Assignment

```

Bottom Navigation (3 tabs):

Tab	Icon	Contents
Home	[Home]	Waiting for Assignment / Active Trip
Trips	[Trips]	Current Trip · Trip History · Completed Trips
Profile	[Profile]	Driver Information · Assigned Vehicle · Settings · Logout

Navigation Rules:

- The bottom navigation is visible on all primary screens after login
- The active tab is visually highlighted
- The Emergency action is available as a floating action button during an active trip
- Notifications are accessed through the notification icon in the top app bar
- The navigation remains consistent across all Driver App screens

5.2 Operator Mobile App Navigation

The Operator Mobile App uses a Bottom Navigation Bar with a central floating action button for creating new trips.

Bottom Navigation (5 items):

Tab	Icon	Contents
Home	[Home]	Dashboard: Live Trips · Today's Trips · Scheduled Trips · Driver Availability · Emergency Alerts · Maintenance Alerts · Documents
Trips	[Truck]	Trip List → Trip Details → Live Tracking → Live Map · Driver Tracking (within Trip Details)
Create Trip	[+]	Route Selection → Cargo Information → Schedule → Pricing → Assign Vehicle → Assign Driver → Review Trip → Trip Created
Alerts	[Bell]	Trip Alerts · Emergency Alerts · Document Expiry · Maintenance Alerts · System Notifications
Profile	[Profile]	Profile · Settings

Navigation Rules:

- The FAB (Create Trip) is centered in the bottom navigation bar
- Live Map and Driver Tracking are accessible within Trip Details (not separate top-level destinations)
- Quick Actions are contextual within each screen (e.g., quick-assign from Trip Details)

5.3 Operator Web Dashboard Navigation

The Operator Web Dashboard uses a persistent left sidebar with a top navigation bar.

```

Dashboard
├── Trip Management
│   ├── Trip List
│   ├── Create Trip
│   ├── Trip Details
│   │   └── Share Trip (WhatsApp / PDF / Link)
│   └── Live Monitoring
├── Customers
│   ├── Customer List
│   └── Customer Details
├── Drivers
│   ├── Driver List
│   └── Driver Details
├── Fleet
│   ├── Vehicle List
│   ├── Vehicle Details
│   ├── Maintenance
│   └── Documents
├── Pricing
├── Reports
├── Notifications
└── Settings
  
```

5.4 Admin Web Dashboard Navigation

The Admin Dashboard provides complete system administration through a structured sidebar navigation.

```
Dashboard
├─ User Management
├─ Roles & Permissions
├─ Customers
├─ Drivers
├─ Fleet
├─ Pricing
├─ Reports
├─ Audit Logs
├─ Integrations
│   └─ Google Maps · ICCES · Notifications · Storage
└─ System Settings
```

Navigation Principles

- Minimize the number of taps or clicks required to complete a task
- Keep frequently used actions easily accessible
- Maintain consistent navigation patterns across platforms
- Ensure users always know their current location within the application
- Prioritize operational workflows over visual complexity
- Provide clear navigation labels and recognizable icons
- Design for one-handed mobile usage on handheld devices
- Support future expansion without requiring major navigation changes
