

MERCON Logistics — User Flow Document

Version: 1.1 (Unified)

Date: July 2026

Prepared For: MERCON Logistics Services Company

Prepared By: Starshape

1. Introduction

The User Flow Document defines the complete user journey across the MERCON Logistics Management System. It outlines how Drivers, Operators, and Administrators interact with the platform throughout the transportation lifecycle.

The objective of this document is to establish a clear navigation and workflow structure before UI/UX design and application development.

2. Driver User Flow

Workflow Overview

Driver Journey — Step by Step

Step 1 — Open App

- Driver opens the application
- System checks for any active assigned trip

Step 2 — Login

- Driver enters Employee ID or Mobile Number
- Driver enters PIN
- System authenticates the driver
- On successful login, the application checks for an active assigned trip

Step 3 — Waiting for Assignment

If no trip is assigned:

- Display "Waiting for Assignment"
- Driver waits for new trip notification

Step 4 — Assigned Trip

If a trip exists, the app displays:

- Customer Name
- Pickup Location
- Drop Location
- Cargo Details
- Vehicle Details
- Start Trip Button

Trip Status: Ready to Start

Step 5 — Start Trip

- Driver taps "Start Trip"
- Before the trip officially begins:
 - Capture cargo photographs (mandatory)
 - Trip Status: Cargo Verification
- After successful upload:
 - Trip officially starts
 - Trip Status: In Transit
 - Operator receives notification
 - GPS tracking starts
 - Navigation opens automatically

Step 6 — During Transit

Driver can:

- View Navigation
- View ETA
- View Trip Details
- Trigger Emergency
- Report Trip Halt

Step 7 — Emergency (Optional)

If an emergency occurs:

- Driver taps Emergency (FAB button)
- System sends emergency alert automatically
- System shares live GPS location with operator
- System records incident in trip history
- System notifies operator immediately
- Trip Status: Emergency / Halted

Step 8 — Arrival

- System detects destination automatically via GPS geofencing (500m radius)
- Display: "You have arrived"
- Show: Complete Trip
- Fallback: Manual "I Have Arrived" button if geofence doesn't trigger
- Trip Status: Arrived

Step 9 — Delivery Verification

Driver uploads:

- Delivery Photos
- Delivery Location Photos
- Trip Status: Delivery Verification

Step 10 — Complete Trip

- Driver taps "Complete Trip"
- System:
 - Stops GPS tracking
 - Saves trip history
 - Notifies operator
 - Stores delivery proof
 - Trip Status: Completed
 - Returns to: Waiting for Assignment

3. Operator User Flow

Workflow Overview

Operator Journey — Step by Step

Step 1 — Receive Customer Request

- Customer requests transportation
- Trip types: One-Time · Daily · Weekly · Monthly

Step 2 — Create Trip

Operator enters (from Web Dashboard or Mobile App):

- Customer Details
- Pickup Location
- Drop Location
- Cargo Information
- Schedule

Step 3 — Pricing

System automatically suggests:

- Route Price
- Customer Rate
- Estimated Cost

Operator may:

- Accept
- Edit
- Save Quotation

Step 4 — Assign Resources

Assign:

- Vehicle (must be available, compliant, and have sufficient capacity)
- Driver (must be available, with no other active trip)

Driver immediately receives trip notification via push notification.

Step 5 — Share Trip

Share trip details via:

- WhatsApp (pre-formatted message)
- PDF (downloadable trip summary)
- Link (shareable URL)

Step 6 — Monitor Trip

Operator monitors:

- Driver Mobile GPS (primary)
- ICCES GPS (secondary)
- Trip Timeline
- Driver Status
- Emergency Alerts

Step 7 — Complete Trip

Receive:

- Delivery Photos (proof of delivery)
- Trip Completion notification
- Trip History updated
- Reports updated

4. Admin User Flow

Workflow Overview

Login (Email + Password)

Dashboard

- User Management
- Driver Management
- Fleet Management
- Customer Management
- Pricing Management
- Reports & Analytics
- Audit Logs
- Integrations
- System Settings

Admin Responsibilities

Manage:

- Users
- Roles & Permissions
- Fleet
- Customers
- Pricing
- Reports & Analytics
- Audit Logs
- Integrations (Google Maps · ICCES · Notifications · Storage)
- System Configuration
- Security

5. Notification Flow

The MERCON Logistics Management System provides real-time notifications to Drivers, Operators, and Administrators to ensure smooth transportation operations, fleet management, document compliance, and proactive maintenance.

Trip Notifications

Event	Notify
Trip Assigned	Driver
Trip Started	Operator
Cargo Photos Uploaded	Operator
Emergency Triggered	Operator (immediately)
Trip Halted	Operator
Driver Arrived	Operator
Delivery Photos Uploaded	Operator
Trip Completed	Operator

Fleet & Vehicle Notifications

Event	Notify
Vehicle Maintenance Due	Operator & Admin
Vehicle Service Due	Operator & Admin
Vehicle Service Overdue	Operator & Admin
Vehicle Breakdown Reported	Operator (immediately)
ICCES GPS Offline	Operator

Driver Document Notifications

Event	Notify
Driving License Expiring	Driver & Admin
Driver ID Expiring	Driver & Admin
Medical Certificate Expiring	Driver & Admin
Other Driver Documents Expiring	Driver & Admin

Vehicle Document Notifications

Event	Notify
Insurance Expiring	Admin
Vehicle Registration Expiring	Admin
Permit Expiring	Admin
Road Tax Expiring	Admin
Inspection Certificate Expiring	Admin
Other Vehicle Documents Expiring	Admin

6. System Status Flow

Every transportation request follows the same standardized lifecycle:

Additionally: Cancelled — can occur at any point before In Transit.

7. User Flow Summary

User	Primary Workflow
Driver	Receive Trip → Start Trip → Upload Cargo Photos (mandatory) → Navigate → Emergency (Optional) → Arrive (geofence/manual) → Upload
Operator	Receive Customer Request → Create Trip (web or mobile) → Pricing → Assign Vehicle → Assign Driver → Share Trip (WhatsApp/PDF/Link)
Administrator	Manage Users → Roles & Permissions → Fleet → Customers → Pricing → Reports & Analytics → Audit Logs → Integrations → System Settings
System	Synchronize Data → GPS Tracking (Mobile + ICCES) → Geofence Detection → Notifications → Reports → Analytics → Document & Maintenance

This document defines the navigation and operational workflows for all users of the MERCON Logistics Management System. It serves as the primary reference for designing the user interface, implementing application logic, and ensuring a consistent user experience across the Driver Operations App, Operator Mobile App, Operator Web Dashboard, and Admin Web Dashboard.
